Initialize first names	<input type="checkbox"/>		

## NEW FEATURES / ENHANCEMENTS (SYSTEM BACK OFFICE)

- Added advanced portfolio pending shares logic to the document prepper section to ensure document actions are considered when sharing.
- Added the ability to customise the KYC screens per business profile.
- Added the ability to edit and/or remove the capturing agent details when creating a KYC portfolio.
- Added country flags and dialling codes for KYC capturing agent details.
- Added the ability to customise the FaceTec screens during the KYC liveness test.
- Added the ability to switch to a different device during the KYC process.
- Added defaults to the KYC capturing process, defaulting the country to South Africa based on the mobile number and ID number being returned from CIPC.
- Added the ability to edit UBOs on the KYC business process.
- Updated the KYC configuration page to split config sections into different tabs for a better user experience.
- Added additional security and verification on document link generation.
- Added additional security and verification image rendering.
- Added additional security and verification on file uploads, file downloads, and HTML form submissions.
- Additional logging added for document signing and document handling processes.
- Changed the process of how initials are generated and how data is built up to render the initial images when applying initials to a document.
- Additional cookie verification added to legacy signing interface.
- Added Microsoft Entra ID (Azure AD) SAML integration. System now supports both SAML and OIDC integration for Microsoft Entra ID (Azure AD).
- Added TIFF file support for uploads in DocFlow.
- Added the AutoExpire flag to FullWorkflow API.
- Updated jQuery UI to version 1.13.2.
- Changes made to Local Signer Signing Ceremony to allow for faster transaction processing.
- Added the ability to include a user's email on the basic signature appearance.

The screenshot displays the 'EasiSign Config for Flownamix Demo' interface. It features a grid of configuration options, each with a dropdown menu. The options are organized into two columns. The left column includes: Signature Type (Custom), Signature Date (No), Signature Signed By (No), Include Middle Names (User Choice), Initialize First Names (User Choice), Save Signature (No), Doc Security Type (None), and Include Email (User Choice). The right column includes: Initial Type (Custom), Signature Time (No), Signature Reason (No), Show Family Name First (User Choice), Lock On Complete (No), Save Initial (No), and Geolocation (Optional). At the bottom right, there are four buttons: Save (green), Remove (red), Registration Config (blue), and Setup Default Config (blue).

## SYSTEM PATCH FIXES

- Fixed an issue for the KYC capturing agent in which the start button did not enable after clicking on the required documents.
- Fixed issues on the Real Time ID verification results for KYC where a red X was always displayed.
- Fixed spacing on KYC compliance report headers.
- Fixed an issue where adding placeholders on a KYC portfolio caused the page to redirect to the dashboard.
- Fixed header alignment on the KYC business process for UBO and Signature by Resolution.
- Fixed an issue where users could add duplicate ID numbers for different UBOs.
- Fixed an issue in a KYC portfolio where the navigation arrows don't always appear.
- Fixed an issue where country flags are not always displayed correctly on certain devices and screen sizes.
- Fixed an issue with SMS account updating where details would fail to update correctly in certain circumstances.
- Fixed an issue during signature image generation where the image would fail to render on certain configurations and signature sizes.
- Fixed error messages being returned on the forgot password page to better align with OWASP standards.
- Fixed an issue where the Approve All button in EasiSign would sometimes still display documents that have already been approved causing an error when then proceeding the approve again.
- Fixed an issue where bulk signing would fail due to missing checks for completed company stamps on a document.
- Fixed an issue on Active Directory LDAP integration where users were able to still login regardless of password expirations on their account.
- Added an additional check on Active Directory LDAP integration to check password policies, determine password expirations, and apply relevant rules.
- Fixed an issue that would cause an error to appear when performing an initial all action for face-to-face.
- Fixed an issue that would cause an error to appear when performing a sign-all action for face-to-face.
- Fixed an issue on FullWorkflow API where AutoRemind does not always save the correct flag on a workflow.
- Fixed an issue where the generation of a new link for expired business account activation emails did not work.
- Fixed an issue where the incorrect user font selection for initials did not update correctly from the profile screen.
- Fixed an issue where the logout button does not work from the completed page after signing a document in EasiSign.
- Fixed an issue with Azure AD login where the redirect sometimes goes to an invalid page after a successful login due to an invalid URL build-up based on the user's previous session.
- Fixed an issue where the tooltip popup for adding face-to-face signers and group signers overlaps with the content of the model, making the popup unreadable.
- Fixed an issue on Create Workflow that still allowed certain illegal characters to be used in a user's email address.
- Fixed an issue where the dropdown field on documents did not order correctly.
