SigniFlow V2025.1.9.6 Release notes.

12 February 2026

New Features / Enhancements (SigniFlow) – Font End

- Added **OneLogin** as an additional Single Sign-On (SSO) provider.
- Implemented a new "**Sign All**" interface to better track signature progress and prevent potential timeouts on larger documents.

New Features / Enhancements (SigniFlow) – My Business

- Added the ability to display initial fields in the audit log.
  This setting can be enabled or disabled by the Business Administrator, as audit size may vary depending on the number of initials placed on a document.
  - o Location: **My Business → Settings**

- Added a setting to define default dialling codes at a business level.
  - o Location: **My Business → Settings**

- Added additional **DocFusion integration options**, allowing the linking of a dedicated event listener to a DocFusion tenant.
- Enhanced SharePoint integration to ensure that workflow creation redirects respect the configured feature flag, determining whether users are directed to the Classic Workflow Engine or the New Workflow Engine.
- Implemented additional security enhancements for **Google reCAPTCHA** rendering.
- Added the ability to configure the temporary folder location used for audit generation.
  This prevents certain antimalware applications and security tools from blocking files generated in the default Windows temporary directory. Configuration level: **Server/Hybrid**
- Added support for using **liveness photos captured during the E-Ident process** for signing purposes.
- Added the ability to define a custom certification reason for audit logs. Configuration level: **Server/Hybrid**
- Updated the **GlobalSign DSS integration** to support Organisation and QTS certificates.

Fixes/Bug Fixes (SigniFlow)

- Fixed an issue in group signing where signatures and/or initials could disappear if two group signers attempted to sign simultaneously.
- Fixed an issue that allowed signature types to be changed incorrectly during signing steps.
- Fixed an issue where aggregated portfolio completion emails were not sent in certain scenarios.
- Fixed an issue that caused errors during signing on unauthenticated (open) links due to a cookie-related problem.
- Fixed an issue where document thumbnails were not regenerated after workflow edits, resulting in outdated participant details being displayed.
- Corrected a spelling error in the email aggregation section during document preparation.
- Fixed an issue preventing documents from being deleted when the document name contained an apostrophe.
- Fixed an issue in dropdown conditional fields where certain values did not display correctly.
- Fixed an issue in reporting where certain roles were not applied correctly.
- Fixed an issue preventing Business Settings from being saved if no default font size value was provided.
- Fixed a login issue in **EasiSign** where users signing in via Azure AD were unable to proceed in certain instances.
- Fixed an issue in group signing where users could sign without completing required initials in specific scenarios.
- Fixed an issue where the "Next" and "Close" buttons were not visible during font signature selection.
- Fixed an issue where workflows containing electronic signatures did not progress to "Completed" status in certain scenarios.
- Fixed an issue in Advanced Workflow where grouped users displayed as individual users within the portfolio.
- Fixed an issue in group signing where text fields completed prior to initialling were duplicated on the front end.
- Fixed an issue where applying a prepper template containing a Date Selector field automatically converted it into a standard Date field.
- Fixed an issue in Advanced Workflow where updating the signature count for a group incorrectly moved the workflow to the portfolio section.
- Fixed visual issues during document preparation where the click effect for current signer selection did not function correctly when switching tabs in the left-hand menu.
- Fixed border display inconsistencies for comb fields when borders were set to "hidden."
- Updated the **GlobalSign QSS process** to ensure that only users within the same business profile can sign using QSS settings, where configured.
- Fixed a business user registration issue caused by a race condition when fetching the server country.
- Fixed an issue where nominated signers were unable to access relevant documents in a portfolio after allocation by the current signer. This occurred only where specific document access rules were configured.
- Updated the **GetDoc API** to prevent deleted documents from being returned.
- Fixed an issue preventing completed documents from being attached to emails when the document name contained commas.
- Added the missing "English" language option for default business language selection.
- Removed **Australia Post Digital ID** as an SSO provider option due to service discontinuation.
- Fixed an issue preventing security override users from being added.
- Fixed an issue where document download rules were not correctly applied in the Classic Basket (Legacy View).
- Fixed an issue preventing the "Sign All" button from appearing for face-to-face signatures in certain scenarios.

- Fixed a limitation in the New Workflow Engine that prevented adding more than 20 participants to a workflow.
- Fixed an issue where "Open" buttons appeared incorrectly for Deleted and Removed documents in the New Workflow Engine.
- Fixed an issue where only Template Administrators and Business Administrators could view relevant workflow and prepper templates in the New Workflow Engine.
- Fixed an issue in the **GetDocumentAudit API** caused by an incorrect lookup for "ActionOrder."
- Fixed an intermittent issue where certain documents incorrectly moved to "Completed" status due to a specific race condition.
- Fixed an issue where custom messages were not left-aligned when added during the Legacy Workflow creation process.
- Fixed an issue in French translations when the additional data setting was enabled in the Legacy Workflow system.
- Fixed an issue where conditional field checkboxes were not fully hidden when conditions were not met.
- Fixed an issue with auto-tagging field alignment where certain positional offsets were not correctly applied.
